

System-based crisis management

Increase corporate security and successfully master crises

innovative - process-oriented - flexible

When the unexpected happens...

Imagine the following scenario:

A serious accident in one of your plants: Three employees were killed and many are injured. There is a leak of hazardous substances, the rescue workers are on duty. The surrounding residents are called through loudspeakers not to leave the houses and lock the windows. The first pictures of the accident are circulating on social media and hateful discussions are raging about missed safety precautions at your location. Journalists are at the door and the CEO wants to know how it could get this far. Thanks to your alerting tool, however, you managed to get all the crisis team members together and so the crisis takes its course...

You are sitting at the head of the table. Your colleagues are talking nervously. Mobile phones ring and you think about where and how to start. You went through the emergency in the crisis team exercise 3 years ago, but suddenly everything seems much more complicated - much more chaotic. But none of this helps you now, because you know the situation gets worse with every minute you hesitate!

DEMiOS is a software tool that supports the crisis team in becoming productive immediately and approaching the problem of the crisis in a structured and efficient manner.

DEMiOS | The dynamo of the crisis team

Crisis management with DEMiOS (1/3)

Structuring

In critical situations, quick and coordinated action is crucial to being able to deal with the situation. DEMiOS is a control tool that supports the crisis team in its methodical work. It helps to clearly define responsibilities, competencies and duties and guides the crisis team through the steps of the management rhythm. Due to the intuitive structure of the processes, the work processes in the crisis team are accelerated and the members can concentrate entirely on developing solutions.

1. Start of staff work
2. Situation assessment
3. Immediate measures
4. Time planning
5. Goals
6. Solutions
7. Placing of order
8. Completion of staff work

Crisis management with DEMiOS (2/3)

Alerting

Thanks to the open interface architecture, an existing alarm system can be integrated in DEMiOS and immediately alert and call all (predefined) crisis team members in the event of a crisis. Alternatively, we have our own simple alarm system.

Interactive Protocoll

DEMiOS presents information and decisions in an interactive log clearly and chronologically. The log function automatically ensures legally compliant documentation in the background. This means that processes and decisions are quick and easy to understand.

CIS— The situation visualization

The Crisis Information System (CIS) developed for DEMiOS enables a detailed, real-time overview of the situation and work in the crisis team. It helps to immediately identify changes in situation and overdue tasks. Thanks to the mobile availability of the CIS, all parties - from the members of the crisis team to top management - on one glance always have a clear status of the crisis.

Crisis management with DEMiOS (3/3)

That's why DEMiOS

- ✓ **Crisis team work made easy:** DEMiOS was developed together with experienced crisis management consultants and benefits from our many years of practical experience in crisis teams. We are only too familiar with the challenges of crisis management and on this basis DEMiOS was developed for you - from practice, for practice.
- ✓ **Easy to use:** We understand that working in the crisis team is extremely demanding and the use of unusual software tools can cause additional confusion. For this reason, we have designed DEMiOS to be particularly user-friendly and intuitive.
- ✓ **System integrability:** Due to the open interface concept, DEMiOS can be easily integrated into your existing system landscape at any time and linked to third-party applications.

- ✓ **Mobile Compatible:** DEMiOS can be used on laptops as well as on desktops, tablets and smartphones.
- ✓ **Tech-Stack:** DEMiOS was developed with Java Spring, PostgreSQL and Angular. A Docker image is provided for self-hosting.
- ✓ **SaaS as Standard:** Software-as-a-Service - no hidden costs, no long-term investments. With the annually cancellable software rental solution, you have full flexibility - you can use the system as long as you think it makes sense.
- ✓ **Strong partners:** DEMiOS is not a tool in which you are on your own after the purchase. We combine many years of consulting work in the area of risk, continuity, emergency, security and crisis management with solid skills in the area of software development and system technology. Our consultants train crisis teams and our IT experts integrate DEMiOS into our customers system landscapes.

The Verismo ecosystem

Holistic event and crisis management

In conjunction with our event management tool CUSTODiOS, we offer a system platform for a continuous process from event recording and event evaluation, linking and transfer into the process of operational risk and continuity management up to the optional escalation into a company's crisis management.

About us

Who are we

Verismo GmbH is a Europe-wide consulting company that specializes in holistic risk, security, continuity (BCM), emergency and crisis management. As a subsidiary of Ingenieurbüro Götsch AG, we combine consulting experience with the latest IT knowledge and provide our customers with holistic solutions that meet the current challenges of security and crisis management. We trust in our multidisciplinary team of experts with many years of professional and consultant experience in the IT industry, insurance industry, industry and in business consulting.

Years of experience

Over the past 20 years, we have assisted numerous companies in introducing crisis management systems and training crisis teams. We have found that even experienced crisis teams can lose their bearings under pressure and with that the overview of the situation and, above all, its consequences. For this reason, we developed the software solution DE-MiOS in 2014, which was specially designed for the operational practice of companies and organizations. The completely new, security and process-optimized version 3.0 will launch in spring 2020.

System and methodology - from practice, for practice!
